See image for details. . Screenshot: A: You can get it from here: Q: JTextArea.append showing strange characters I am creating a simple text editor in Java and as a part of my design, it displays the current number of characters in the jtextarea. I've added a simple paint method to show what happens to the textarea when I use append(). I use this method to draw the textarea which contains numbers and letters. Here is a screenshot of what happens when I append something to the textarea: Here is the paint method: public void paint(Graphics g) { int i=0; for(String s : myStringArray) { g.drawString(s, i, myStringArea.getHeight()-i*2); i++; } } Here is the code that adds text to the textarea: public void addString(String s) { myStringArray.add(s); repaint(); And finally, here is the method that clears the textarea and sets the font size to 8: public void setFontSize(int size) { myStringArea.setFont(new Font(Font.SERIF, Font.PLAIN, size)); myStringArea.setText(""); myStringArea.setFont(myStringArea.getFont()); repaint(); Now, before I tell you the weird part, here is the code that sets the font size and applies the paint method to the textarea: setFontSize(8); myStringArea.setFont(myStringArea.getFont()); myStringArea.setBackground(Color.white); 82157476af
